**6:05pm-6:25pm** – HPDE 1 – New track drivers, learning the basics

**What is NASA Utah?** We're the Utah Region of the National Auto Sport Association-NASA. NASA has created programs that allow owners of both racecars and high-performance street-driven vehicles to enjoy the full performance capabilities of their cars in a safe and controlled environment. NASA offers many different programs that will allow you to enjoy motorsports on several different levels, including High Performance Driving Events (HPDE), Time Trial, and Road Racing programs.

**What is NASA HPDE?** High Performance Driving Events (HPDE) are where you start your on-track driving, learning the basics of driving safely, at speed, in your car. We provide the instruction and track; you provide a safe car.

**What is NASA Time Trials?** Experienced drivers, pushing their cars racing for the single best lap of the day. There are car classes, and allowances for most common modifications. This format allows enthusiasts to enjoy a wide range of aftermarket upgrades while still being able to compete in a fair environment.

**What is NASA Road Racing?** NASA has road racing classes for almost any type of vehicle ranging from production sedans, stock cars, and formula cars. If you do not possess a competition license, NASA has programs that will allow you to participate in a racing school to become qualified to race.
